Google Cloud
AWS
Terraform
Kubernetes
Python
JS/TS
Docker
Postgres
REST/GraphQL
Azure
GO
Kafka
Azure
Argo
GKE/EKS

PROFILE

Cloud Platform and DevOps Technical Lead with a mission to help organizations thrive through the power of technology. Expertise in designing scalable, efficient solutions and translating complex infrastructure challenges into clean, maintainable systems. Over 10 years of experience across AWS, GCP, and Azure — leading large-scale cloud migrations, modernizing legacy application stacks, and building the DevOps foundations that engineering teams rely on daily.

Collaborative and forward-thinking: equally effective working with developers and stakeholders as going deep in infrastructure. Leads by example, mentors teams on cloud-native best practices, and consistently drives initiatives from concept through to production.

EMPLOYMENT HISTORY

DevOps Technical Lead at EpexSpot (via Skyworkz), Amsterdam
Jan 2024

At EPEX SPOT, Cole serves as DevOps Technical Lead, driving the company's cloud transformation and platform modernization across the full engineering organization. He led the lift-and-shift of over 60 applications from on-premises datacenters to GCP and AWS, then continued pushing the platform forward — containerizing applications, standardizing deployment practices, and building the developer tooling and workflows that teams depend on daily.

Key Achievements:

- Orchestrated the migration of 60+ applications from on-premises to GCP and AWS, establishing foundational Terraform IaC templates for GCS, Pub/Sub, Cloud SQL, GCE, and Secret Manager that became the organization-wide standard
- Containerized and deployed applications to Google Cloud Run and GKE, modernizing the company's deployment architecture away from legacy GCE VM-based workflows
- Built and standardized a company-wide CI/CD release process in GitLab
- Architected Lisaria, a unified batch and queue management platform that consolidated a fragmented series of legacy applications into a single scalable solution
- Overhauled developer onboarding and enabled local development workflows for containerized applications, significantly reducing friction for engineers across the org
- Conducted training sessions with DevOps engineers and developers throughout the organization, elevating cloud-native expertise across the team
- Established comprehensive GCP-native logging, monitoring, and alerting solutions, replacing legacy Centreon infrastructure with real-time observability across all services

Toolset: GCP, GKE, Cloud Run, GCS, Cloud SQL, GitLab, Terraform, Ansible, Docker, Kubernetes, SonarQube, PHP, Jira, AWS

Senior Cloud Engineer at Pinterest, San Francisco

Mar 2023 — Oct 2023

At Pinterest, Cole embedded within a large-scale infrastructure security team responsible for securing cloud environments serving hundreds of millions of users. He contributed to the design and enforcement of IAM security posture across both AWS and GCP, working closely with internal application teams to ensure all service-to-service communication followed least-privilege principles.

Key Achievements:

- Provided Cloud Architecture guidance on AWS IAM security stacks, advising internal application teams on proper role design, policy scoping, and secure resource access patterns across a massive multi-account AWS environment
- Authored and maintained Terraform modules for AWS IAM roles, subnets, security groups, and firewall rules, contributing to a standardized IaC approach used across the infrastructure org
- Worked with GKE clusters to manage service account bindings, Workload Identity configurations, and Kubernetes RBAC — ensuring secure pod-level access to GCP secrets and downstream services
- Managed GCP service account lifecycle and secrets access patterns for GKE workloads, integrating with Secret Manager to enforce secure credential delivery at runtime
- Contributed to ArgoCD-based GitOps workflows for deploying and managing GKE workloads, supporting continuous delivery pipelines across internal platform services
- Worked with AWS Lambda-backed internal tooling for automating security group auditing and IAM policy validation, reducing manual review overhead for the security team
- Used and contributed to in-house security group management applications, helping teams self-serve IAM rule attachments while maintaining compliance with org-wide security policies
- Collaborated with a large team of infrastructure engineers and architects to deliver scalable, auditable security solutions across an environment serving hundreds of thousands of concurrent users

Toolset: AWS, GCP, GKE, Lambda, Terraform, ArgoCD, Kubernetes, IAM, Secret Manager, Workload Identity, Github

Solutions Architect at Hex Technologies, San Francisco

May 2022 — Jan 2023

At Hex Technologies, Cole worked as a Solutions Architect, collaborating with data scientists worldwide to develop machine learning solutions within a hosted Jupyter Notebook environment. He provided valuable feedback to engineering teams on product performance, customer sentiment, and new feature ideas, while also leveraging Python and cloud technologies to create custom solutions for clients. Additionally, Cole crafted architecture diagrams, demo projects, and data visualizations, ensuring seamless integrations with both Google Cloud and AWS platforms.

- Built Python automation pipelines for customer ML workloads running on GCP and AWS, reducing manual setup time and enabling repeatable deployment patterns
- Managed Kubernetes-based deployment environments and contributed to CircleCI CI/CD pipeline improvements, tightening the feedback loop between code and production
- Instrumented customer workloads with Datadog and Sentry, feeding observability signals back to engineering to drive product reliability improvements
- Authored Terraform-based infrastructure templates for recurring customer deployment patterns on GCP and AWS, establishing reusable IaC standards
- Created architecture diagrams, demo environments, dbt models, and data visualizations to accelerate customer onboarding and pre-sales engineering

Toolset: AWS, Kubernetes, GitHub, CircleCI, Terraform, Python, JavaScript, Datadog, Sentry

Cloud Engineer at MediaMonks, San Francisco

May 2021 — May 2022

At MediaMonks, Cole worked as a Cloud Engineer, building serverless architectures and automating workflows for various internal tools and projects. Built and operated serverless platform infrastructure on GCP, automating workflows and data pipelines for internal tools and client projects. Served as the cloud engineering resource across multiple teams — designing architectures, leading platform migrations, and standardizing deployment and data integration patterns.

- Designed and implemented a serverless platform using Cloud Functions and Cloud Run, replacing manual workflows with event-driven automation and reducing operational overhead
- Built ETL pipelines in Python and Node.js across the GCP stack — Cloud Functions, BigQuery, Fivetran — enabling scalable data movement and scheduled SQL transformations
- Architected API Gateway solutions with custom serverless backends, establishing reusable patterns adopted across multiple client project workstreams
- Managed Kubernetes workloads on GCP and contributed Terraform IaC for cloud infrastructure provisioning, bringing repeatability to previously manual deployments
- Delivered platform migration and cloud architecture consulting across diverse teams, including documentation, training, and hands-on engineering services

Toolset: *GCP, Kubernetes, Cloud Functions, Cloud Run, Github, BigQuery, Terraform, Fivetran*

Sr. Systems Engineer at RoundTower Technologies, Cincinnati

Sept 2016 — Oct 2018

At RoundTower Technologies, Cole served as a Senior Systems Engineer, where he implemented advanced snapshot technology, reducing backup times by over 70% for VMware and NAS systems. His expertise in cloud networking, including VPCs, firewall rules, disaster recovery, and high availability, helped deliver robust infrastructure solutions for customers. He also saved a client over \$6,000 monthly in AWS S3 storage costs and worked across multiple cloud platforms, such as Google Cloud, AWS, and Azure, to implement tailored PaaS and IaaS solutions.

- Implemented team first array-based snapshot technology for a customer, decreasing their backup times by over 70% for VMware and NAS backups, while also reducing performance load
- Saved a customer over \$6,000 a month in AWS S3 Storage for off-site storage due to a backup misconfiguration
- Worked with Google Cloud, AWS, and Azure PaaS/IaaS for multiple different customers.

Toolset: *AWS, GCP, Azure, S3, Ansible, Github, Perl, Powershell, Bash, VMware, ServiceNow, Python, Typescript/JS, Node*

Cloud Engineer at National Institute of Allergic and Infectious Diseases (NIAID), Washington, D.C.

Apr 2014 — May 2016

At the National Institute of Allergic and Infectious Diseases (NIAID), Cole worked as a System Engineer, where he administered Commvault backups for over 1,400 clients, managing a total data size of 5.5 petabytes. He also managed NetApp storage arrays, performing capacity adjustments, creating new shares, and conducting regular maintenance to ensure optimal performance.

- Developed automated backup monitoring scripts to streamline the identification of potential failures and ensure timely data protection.
- Assisted in scaling storage solutions to accommodate growing research data, ensuring high availability

- Commvault backup administration for 1400 clients including VM's, NAS, and physical clients with a total data size of 5.5 PB

Toolset: *NetApp, VMware, AWS, Commvault, Bash, Puppet, ServiceNow, Linux, HPC*

○ **Sr. Systems Administrator at General Electric, Cincinnati**

Jun 2012 — Jun 2014

At General Electric, Cole served as a Senior Systems Administrator, overseeing an extensive environment of over 9,200 servers and managing more than 7 petabytes of data. He was responsible for providing daily operational reports on backup status to executive-level management, ensuring the protection of one of the world's largest data storage environments.

- Monitor and manage environments with a combined monthly volume exceeding 7 Petabytes and 9,200 Servers
- Run daily operations backup call reporting environment status to GE executive level management
- Worked on a team of 26 engineers to protect one of the largest data storage environments in the world
- Helped to migrate over 600 servers from Hamilton, Ohio to Cincinnati datacenter in under 3 months

Toolset: *NetBackup, Avamar (EMC), VMware, Nagios, ServiceNow, Linux/Unix, Bash*

🎓 EDUCATION

○ **Bachelors of Science: Information Technology, Western Governors University**

May 2014 — May 2019

- Cloud technologies
- Network and Security
- Oracle SQL Database Administration, MySQL Database Administration
- Data Science, Python programming, Java programming
- Project Management, Encryption policies, PII
- Extensive use of the Microsoft Office Suite

○ **Springboard**

Jun 2019 — Sept 2020

700 hours of hands-on course material, with 1:1 industry expert mentor oversight, and completion of 4 in-depth portfolio projects. Mastered skills in front-end web development, back-end web development, databases, and data structures and algorithms.

★ COMPLETE SKILL LIST

○ **Cloud GCP:** Cloud Run, Cloud SQL, Spanner, GKE, App Engine, Pubsub, Filestore, Memorystore, GCS, GCE, Cloud build

Cloud AWS: S3, Lambda, RDS, Cloudfront, ECS, ElastiCache, Kubernetes

Cloud/Code general: Docker, Javascript, Python, Streamlit, Dashboards, Heroku, MongoDB, Landing Zones, IaC with Terraform

Databases: PostgreSQL, MySQL, MSSQL, Oracle, MongoDB, Redis

Integration: REST, GraphQL

Monitoring & Logging: Jenkins, GIT, Ansible, Nagios, Grafana, CircleCI, Datadog

Soft skills: Presenting, leading by example, managing projects, scrum master, PoC leader
